ABSTRACT

The Thesis/Project Web Portal is designed to simplify how universities manage academic thesis/projects. It streamlines key processes such as submitting proposals, securing approvals from supervisors and boards, and completing pre-defense and final defense stages. The system also helps with document organization and keeps project details easily accessible.

This portal encourages better collaboration between students, supervisors, and administrators, ensuring smooth communication and timely project completion. Its user-friendly interface makes it simple to navigate, and the system is built to adapt and scale based on future needs.

Security measures, like controlled access, protect user information and project data. Clear roles and permissions are in place to make responsibilities straightforward and organized.

By reducing administrative burden and promoting teamwork, this system reshapes how thesis/projects are handled at universities. Future plans include adding mobile access and AI-based features to suggest project ideas and enhance the overall experience.
